Normalization HW #1

Part One

1. Respond to CEO Miles Meservy with something positive, such as saying his spreadsheet is a great start for the database design and add that, as a database consultant, you can improve upon it.

2. 1NF table

PackageID	TagNumber	InstallDate	SoftwareCostUSD
AC01	32808	09-13-2005	754.95
DB32	32808	12-03-2005	380.00
DB32	37691	06-15-2005	380.00
DB33	57772	05-27-2005	412.77
WP08	32808	01-12-2006	185.00
WP08	37691	06-15-2005	227.50
WP08	57222	05-27-2005	170.24
WP09	59836	10-30-2005	35.00
WP09	77740	05-27-2005	35.00

3. The primary key is a composite key, using columns PackageID and TagNumber.

Part Two

1. Table

PackageID	PackageName	TagNumber	Model	InstallDate	SoftwareCostUSD
AC01	Lotus Notes	32808	HP	09-13-2005	754.95
DB32	Portal	32808	HP	12-03-2005	380.00
DB32	Portal	37691	Apple	06-15-2005	380.00
DB33	Portal 2	57772	Lenovo	05-27-2005	412.77
WP08	Windows 7	32808	HP	01-12-2006	185.00
WP08	Windows 7	37691	Apple	06-15-2005	227.50
WP08	Windows 7	57222	Lenovo	05-27-2005	170.24
WP09	Windows 8.1	59836	Sony	10-30-2005	35.00
WP09	Windows 8.1	77740	Microsoft	05-27-2005	35.00

- 2. Functional dependencies:
 - PackageID → PackageName
 - TagNumber \rightarrow Model
 - PackageID, TagNumber → InstallDate, SoftwareCostUSD
- 3. Some attributes are not dependent on the composite primary key in the table (PackageID, TagNumber). For instance, PackageName is dependent on PackageID, but it is not dependent on TagNumber, meaning it is not dependent to the key as a whole. Same goes for Model, which is not dependent on

PackageID. In addition, there exists the risk of encountering anomalies on this table that if we were to remove (WP09, Windows 8.1, 59836, Sony) from the table we would lose that specific computer and Sony for good.

Part Three

- 1. Primary key(s):
 - Packages table PackageID
 - Installations table PackageID, TagNumber
 - Tags table TagNumber
- 2. Functional dependencies:
 - Packages table
 - o PackageID → PackageName
 - Installations table
 - o PackageID, TagNumber → InstallDate, SoftwareCostUSD
 - Tags table
 - \circ TagNumber \rightarrow Model
- 3. The new tables are in 3NF, because the attributes in every table are only dependent to its table's whole key, and nothing but the key (there is no multiple key dependency). In addition, they are free of all anomalies meaning you can delete rows from the Installations table without losing a package or computer for good. So help me, Codd.

- Inctallations

4. ER diagram

		– mstana	itions —		
		<u>PackageID</u>	<u>TagNumber</u>	InstallDate	SoftwareCostUSD
Packages		AC01	32808	09-13-2005	754.95
